Resurfacing safety guidelines, conditions, and requirements:

- Remove items out of the tub and bathroom, including artwork. Drawers/cabinets not included. We will need the area immediately outside the bathroom for our equipment and ventilation.
- Cover all furniture, artwork, lighting, and personal belongings completely with plastic in the areas close to where work is being performed or ANY & ALL areas open to overspray drift. **This is required!**
- Make sure there is enough room so our technicians can move from room to room & have the area around the slider door clear so we can ventilate apartment from there.
- Turn off all electronics (i.e. computers, gaming consoles, etc.) in order to avoid over-spray dust from entering cooling fans.
- The refinishing process involves the use of chemicals. People may suffer adverse reactions to some of the chemicals used in the refinishing.
- The resident must not be in the dwelling during the refinishing process. The resident must stay out for at least seven hours after work is completed (i.e. 8:00 p.m. or later).
- All pets must be removed from the unit during & six hours AFTER completion of the refinishing process.
- People with a history of respiratory distress - such as asthma, pregnant women, infants, and people with health concerns or chemical sensitivities - should stay out of the dwelling for a minimum of 24 hours from job completion.
- Resurfacing is similar to painting a small car in your apartment home. There is going to be a lot of overspray mist floating around. Please take the proper steps to protect your belongings.
