

Dear Resident(s),

Your TUB was recently RESURFACED on _____ (DATE) _____. Please allow 24 Hours to dry before use.

Re-surfacing is the process of applying a new surface coating to the tub - extending the life of the tub. To ensure your newly re-surfaced tub stays like new, here are some recommendations and cleaning instructions for you:

RECOMMENDATIONS:

HAND DRY FOR 10-DAYS

For 10-days, dry after each use so the bath tub can cure properly.

USE SOAP DISH

Please do not allow bar soaps to remain on tub. The acids from the soaps will damage the coatings.

DO NOT USE SUCTION CUP BATH MAT

The suction pressure from a suction cup bath mat will damage coating over time.

REMOVE SUCTION-FREE BATH MAT

If you are using a suction cup free bath mat, pull up and clean at least once a week under mat.

CLEANING INSTRUCTIONS:

BASIC & HEAVY CLEANING

A mild dish liquid soap and a sponge work well. For dirty tubs, please use Non-Abrasive Gel or Liquid Cleaners (409, Mr. Clean, etc.). Avoid use of harsh abrasive cleaners such as Ajax, Comet etc. and avoid use of abrasive Scotch Brite scrub pads or any other abrasive pad for a longer fixture life.

If you have any questions regarding your resurfacing, please feel free to call our office at (253) 884-7836 or email us at info@surfacerenew.com. ***We are proud to work for you and thank you for supporting our family business!***

Sincerely,

The Surface Renew Team
